

3 easy ways to streamline your water admin

We know that running a business means you already have your hands full. Worrying about water bills is an extra demand on your time that you could do without. **That's why we give our customers simpler ways to view, pay and store their water bills, so they have one less thing to worry about.**

1. Banish paper bills

Managing invoices can create big headaches for small businesses. Switch to e-billing and you'll never misplace an important invoice again. Wherever you are and whenever you need them, your documents are all securely stored in one easy to access location. Simply log in from any device for instant access to invoices for all of your sites, along with your full account history and easy payment options.

2. One bill, less hassle

If multiple business water accounts mean different invoices at different times from different providers, it's time to make the switch!

Bringing water and waste water accounts for all sites to a single provider like SES Business Water means you'll get one easy to manage invoice and one single monthly payment.

3. Simpler payment

For a completely hassle-free way to manage your water bills, why not set up a direct debit? It's a more convenient way to spread payments across the year and make sure you never miss a payment date. Our straightforward budget plan allows customers to pay the same agreed amount each month. We then review your consumption at the end of the 12 month period and adjust your payments for the year ahead. Simple!
